MY PROFILE & ACHIEVEMENTS

Senior AI, Data & Platform Architect with 16 years in consulting and leadership of enterprise data platforms in Life Sciences. Design **Snowflake**, **Databricks** and **Azure** cloud-native **enterprise AI & data platforms**, combining hands-on architecture, delivery rigor, and strong client-facing leadership to build trusted and scalable **medallion architecture data foundations**, reusable accelerators, and **AI-enabled data products** from 350+ sales & activity data sources, used across **60+ countries and 2,000+ users**.

- Built Snowflake and Databricks medallion accelerators **reused in 15+ projects** reducing ingestion & transformation time **from 2 weeks to 2 days** per data source.
- Developed and improved production ELT/ETL ingestion and transformation pipelines with reusable data quality framework, **enhancing data trust** and cutting monthly costs by **40%**.
- **Trusted technical lead** with hands-on contribution and advisor role on **more than 20 projects**, driving architecture, **implementation best practices** and **mentoring**, leading to growth and **promotion of junior architects**.

DATA, AI, PLATFORM SKILLS & LEADERSHIP

DATA PLATFORM & ARCHITECTURE	Snowflake, Databricks, Fabric, SQL Server, Azure cloud-native architectures, Medallion architecture, Docker, Azure networking (ACA, vnets, Gateway).
GENAI & INTELLIGENT SEARCH	Azure AI Foundry, Azure OpenAI, Cognitive Search, RAG workflows, Snowflake Cortex, Databricks Genie, Claude Code.
DATA ENGINEERING & INTEGRATION	Ingestion & transformation pipelines (batch, stream), ELT/ETL (dbt, PySpark, SSIS, Airflow, Informatica), Lakehouse, Iceberg.
DATA GOVERNANCE & MANAGEMENT	Data quality, data validation, data modelling, master data management, harmonization, metadata, lineage, integrity checks, data profiling.
DEVELOPMENT & AUTOMATION	Python, SQL with best practices & standard patterns (CDC, SCD), Bash, Linux, Automation scripting, Reusable frameworks & accelerators.
DEVOPS & DEPLOYMENT AUTOMATION	GitLab CI/CD, Infrastructure as Code (IaC), Databricks Asset Bundles (DAB), Deployment automation, Environment provisioning, Containerization.
BI & ANALYTICS	Power BI, Tableau, Semantic layer design & ARD, SSAS, Dashboarding & self-service analytics.
COLLABORATION & LEADERSHIP	Client-facing consulting, Stakeholder management, Technical leadership, Mentoring, Cross-functional collaboration, Requirements analysis, Delivery ownership, Innovation, Problem-solving, Best practices, Standardization.

EDUCATION & CERTIFICATIONS

Snowflake SnowPro Core	PREPARATION – Q3 2026
Databricks Data Engineer Associate	OBTAINED – OCTOBER 2025
Master's degree in Computer Science for Business management MIAGE – Université de Haute Alsace, Mulhouse - France	OBTAINED WITH HONORS - JUNE 2010
Bachelor's degree in Computer Science Université de Haute Alsace, Mulhouse - France	OBTAINED - JUNE 2008

LANGUAGES

French, native speaker (C2) | **English**, fluent (C1) | **German**, beginner (A2)

PROFESSIONAL EXPERIENCE

IQVIA – Basel, Switzerland

June 2013 – Present

At IQVIA, a worldwide leader in healthcare analytics and clinical research, I was a core member of the EMEA Commercial Tech team, supporting the delivery of technology platforms supporting Pharma Commercial business, analytics solutions, and AI-ready data platforms that unified fragmented data into actionable insights.

Engagement Manager | Solution Architect, Technical Lead

October 2022 – Present

As a Solution Architect on Data Platforms (AWS Snowflake, Azure Databricks) and Azure cloud-native AI platforms (Azure OpenAI, Azure AI Foundry) with hands-on implementation, I lead multiple projects and mentor technical teams, ensuring requirement translation with business stakeholders.

- Led Snowflake SQL & compute optimization initiatives, **lowering monthly costs by 40%**.
- Built and launched an internal accelerators marketplace for **agentic LLM-assisted** code generation, standardizing best practices, deploying **10 internal accelerators**, reducing delivery time **from 2 weeks to 2 hours**, and enabling non-technical teams to adopt the ready-to-use platform.
- Designed and implemented **Snowflake** and **Databricks** accelerators with a **standardized commercial data model** and **modular ETL/ELT pipelines**, reused across **15+ projects**, **automating** and **accelerating** data sources onboarding and transformation times **from 10 days to 2 days per source**, reducing delivery and operational costs.

Senior Consultant | Technical Lead, Senior Data Engineer

October 2019 – October 2022

As a technical lead, I built end-to-end integrated Data Platforms on AWS Snowflake for business reporting, ad-hoc analysis and data product self-service, ingesting and standardizing **350+** commercial data sources in enterprise-grade data hubs.

- Designed and implemented a **unique Commercial data hub** and **trusted data foundation** for **60 countries**, multiple sales lines, and **2,000+ data consumers**, expanding platform adoption by **40%** and **increasing data processing frequency** from weekly to daily.
- Led a team of up to **15 developers** and successfully **mentored** architects whose growth **led to promotions**.
- Implemented standardized Commercial Pharma data model and business rules engine (markets, alignments) across **10 projects**, reducing development times for subsequent projects by **70%**.

Consultant | Data Engineer

October 2016 – October 2019

As a data engineer and technical lead, I developed Salesforce Effectiveness dashboards and data integration platforms for **7 clients** in **GxP context** and **regulated environments**, harmonizing Veeva CRM and market sales data across up to **15 countries** to deliver a unified view of commercial performance in **Power BI** and **Tableau** and reducing data integration times by **30%**.

Analyst | Data Engineer

June 2013 – October 2016

As a data engineer, I developed data ingestion and transformation pipelines in SQL Server **optimizing data management processes** amongst teams and projects. Designed and implemented a **standardized, reusable medallion data model**, along with ETL and master data management processes for a sales data harmonization platform, using Microsoft SQL Server, Microsoft SSIS and Microsoft MDS, reducing implementation time of data ingestion processes by **~20%** and **reused across projects**.

SopraSteria – Strasbourg, France

June 2010 – June 2013

Analyst | Software Engineer

As a Software Engineer, I delivered multiple projects for Banks, Schools, Aviation & general industries in various stacks and programming languages like Java EE, C#.NET, Qt/C++, Windows CE.

LEISURE & OTHERS

Self-hosting (60+ Docker containers) | Home automation (energy-saving focus) | Lego building | Choir founder | 3D Printing
